SUMMARY

Customer-facing software engineer with 2+ years of experience designing and delivering production-grade systems across AWS, Angular, React, and Node.js. Experienced in rapidly delivering solutions for regulated and operational workflows, including payments, insurance claims, and NDIS platforms.

SKILLS

Languages & Frameworks: TypeScript, Python, C#, Angular, React, React Native, Node.js, Django, .NET Core

Infrastructure & Data: AWS (ECS Fargate, EC2, RDS, Lambda, EventBridge, SQS, CloudWatch, CloudFront), Azure, PostgreSQL, MySQL

EXPERIENCE

Software Developer, iMSX

Mar 2025 – Present

- Coordinated with an external insurance organisation to rapidly deliver a multi-workflow claim management system for Review Officers within two months, using Claude, Angular and .NET.
- Built compliance advertisement classification workflows with Angular and Node.js, integrated with Westpac's payments, processing 1,000+ transactions per month at a six-figure monthly volume, with a focus on reliability, traceability, and resilience.
- Redesigned legacy PDF generation into an asynchronous EventBridge and Lambda workflow, reducing processing time from about 1 second to an average of 100 ms.
- Built a log-based Change Data Capture (CDC) rollback mechanism for a platform migration, maintaining data synchronisation within 3 seconds and enabling urgent failover to the legacy system during production failures.
- Owned end-to-end testing in the absence of a dedicated QA function, building Playwright coverage and integrating AI-driven browser automation to catch edge cases pre-release, cutting release testing time from 1 day to 1 hour.

Software Developer Intern, Webvine

Nov 2024 – Feb 2025

- Built a full-stack licence management system using Next.js, .NET Core, and MSSQL to manage the issuance, renewal, and expiry of 70+ licences for an Azure support team.
- Built automated frontend test suites with Jest, reducing the QA team's manual testing effort and identifying previously undiscovered defects before release.
- Designed token-based licence keys and audit logging across issuance, renewal, and revocation workflows to meet security requirements and improve traceability.

Junior Software Developer, Orefox

Feb 2023 – Nov 2023

- Initiated and shipped 4+ React, jQuery, and Django tools in 6 months, supporting mapping, job management, and spatial search for 10 geologists across 2 projects.
- Forked and extended the open-source jKanban library for the geology team's task board, replacing a 4-click, form-based workflow with interactive and visible drag-and-drop status updates.

Software Developer, Queensland Murray-Darling Catchments (QMDCL)

Mar 2022 – Dec 2022

- Built and operated a water-monitoring platform (React, Node.js, Firebase) for 6 river rangers across 80+ sites in Queensland, eliminating 5 coordination meetings and 500+ km of field travel per month.
- Built an offline-first data-capture system with automatic bidirectional synchronisation upon internet reconnection, allowing rangers to record readings at remote sites without mobile coverage and eliminating most associated travel.

EDUCATION

Bachelor of Computer Science (Honours), University of Technology Sydney

Dec 2023

First Class Honours | GPA: 5.94/7.00 | Honours Project: Smart Inventory Management System
