SUMMARY

Software engineer with experience in delivering production-grade systems in enterprise industries. A quality observer and product-focused engineer who worked in a fast-paced environment, owning technical decisions ranging from application level to infrastructure layer.

SKILLS

Languages: TypeScript, Next.js, React, Angular, Node.js, .NET Core, Python, Django, SQL

Cloud & Infrastructure: AWS (ECS Fargate, EC2, RDS, Lambda, EventBridge, SQS, CloudWatch), Azure (App Service, Functions, SQL Database), Terraform, Docker, Linux, Firebase

Delivery & Data: GitHub Actions, PostgreSQL, MySQL, MSSQL, Redis, Playwright, Jest

AI-Driven: Claude Code, Codex, Cursor

EXPERIENCE

Software Developer, iMSX

Mar 2025 – Present

- Owned end-to-end payment integration with Westpac QuickStream, powering low-volume, high-value B2B invoicing at six-figure monthly transaction volume.
- Introduced a Strangler Fig migration strategy for a legacy PHP/jQuery codebase, using AI-driven parity checks to validate feature equivalence between systems, reducing workflow defects by 30%.
- Identified and closed an observability gap in a legacy database by architecting serverless heartbeat monitoring (AWS Lambda + EventBridge), cutting mean-time-to-detect on outages by 80%.
- Architected a log-based Change Data Capture (CDC) rollback mechanism, enabling automatic failover from the new system to legacy on failure and cutting synchronisation time to 3 seconds.
- Closed an observability gap by building a scheduled heartbeat (Lambda + EventBridge) to alert within 5 minutes, moving detection ahead of customers and cutting ~10 support tickets/month.
- Architected a multi-agent AI development workflow with subagent orchestration and spec-driven prompts, cutting feature delivery time from 2 days to 4 hours, a 200% increase in delivery velocity.

Software Developer Intern, Webvine

Nov 2024 – Feb 2025

- Designed and built a full-stack licence management system (.NET REST API & MSSQL) covering issuance, renewal, and expiry, cutting onboarding administration by 2 hours per user.
- Reduced post-launch change requests by 60% by scoping licensing requirements directly with stakeholders and iterating the workflow based on user feedback before release.

Junior Software Developer, Orefox

Feb 2023 – Nov 2023

- Optimised geospatial search leveraging GeoDjango's PostGIS spatial indexing, cutting map query response time by 30%.
- Collaborated directly with geologists to redesign mapping and search features around real fieldwork practices, driving a 50% increase in map feature usage within three months of release.

Software Developer, Queensland Murray-Darling Catchments (QMDCL)

Mar 2022 – Dec 2022

- Led development and operation of a water-monitoring platform (React, Node.js, Firebase), cutting 5+ coordination meetings and 500+ km of ranger travel per month.

EDUCATION

Bachelor of Computer Science (Honours), University of Technology Sydney

Dec 2023

First Class Honours, GPA: 5.94
